

TruBilling — User Manual

Application: TruBilling

Version: 2.0

Last updated: 16 July 2026

About this manual

This guide is for **cashiers**, **store managers**, and **support staff** who use the **TruBilling** desktop application at the retail counter. It explains how to perform everyday tasks: billing, quotations, returns, day close, printing, and sync.

For a technical feature reference (configuration, MongoDB collections, API sync details), see [RR-Bridal-Store-Billing-WPF-Feature-Guide.html](./RR-Bridal-Store-Billing-WPF-Feature-Guide.html).

PDF / Word copies: Export this Markdown to PDF or DOCX when you need printable handouts (RR-Bridal-Store-Billing-User-Manual.pdf / .docx and TruBilling-User-Manual.pdf / .docx). The Markdown file is the source of truth.

1. Introduction

TruBilling is a **point-of-sale (POS)** application for retail counters. It works **offline-first**: bills are saved on the local computer and synced to the central office system when the internet is available.

What you can do

Task	Where
Create and post sales bills	Billing
Hold bills and resume later	Billing
Create quotations and convert to bills	Quotations
Register customers	Customers
Register salesmen	Salesman
Find a posted bill (view / return / adjust)	Bill Lookup
Collect credit (pay-later) balances	Credit Bills (primary till)
Process returns and exchanges	Returns
Correct posted bills	Adjustments
Reprint invoices	Duplicate
Open/close business day	Day Close
Record expenses	Expenses (primary till)
View sales and inventory	Dashboard (primary till)
Track online COD payments	Online Sales (primary till)
Print barcode labels	Barcodes
Configure printers and sync	Settings (primary till)

2. Logging in

1. Open **TruBilling** on your till computer.

1. The login screen shows the store name and till number.

1. Enter your **email** and **password** (provided by your manager).

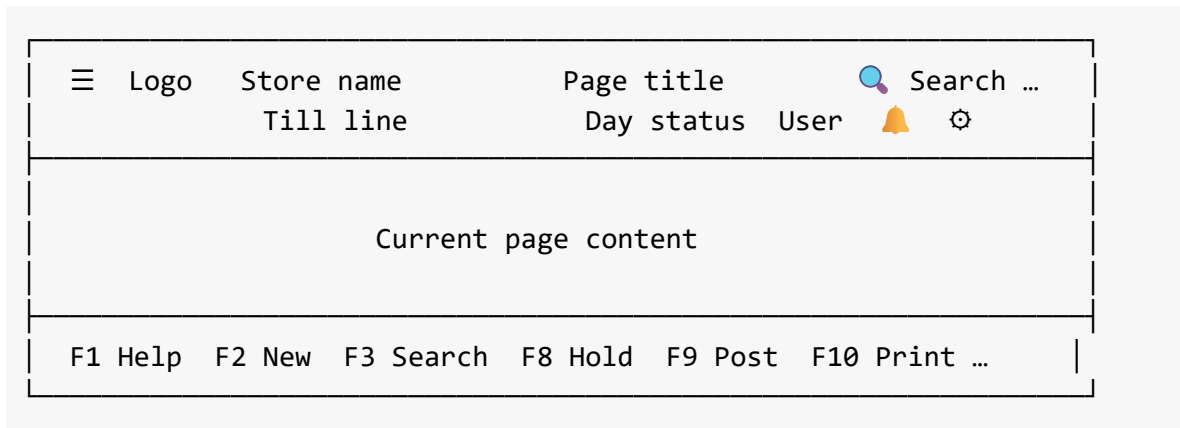

1. Click **Login** or press **Enter**.

Notes:

- Credentials are validated against users synced from the central system.
- Only one person can be logged in on the same till at a time.
- If you see a sync warning banner, ask the manager to run sync from Settings before billing.
- After login, the app opens on the **Billing** screen.

To sign out, click the **logout icon** in the top-right header or choose **Logout** from the navigation menu.

3. Main screen layout

Area	Purpose
≡ Menu	Opens the navigation drawer with all pages
Global search	Scan or type a product code; on Billing, adds items to the bill
Day status chip	Shows whether the business day is open or closed; click to go to Day Close
Notification bell	Shows pending items waiting to sync; click to view and sync
Settings gear	Opens Settings (primary till only)
Footer shortcuts	Quick access to F1–F12 keys

Press **Escape** to close the navigation drawer. **F2 New** clears or resets the **current** page (not only Billing).

4. Starting your day

Complete these steps **before** posting any bills.

Step 1 — Sync product data (primary till / manager)

1. Open **Settings** (gear icon or navigation menu).

1. Go to **Connection & sync**.

1. Log in with your central office credentials if not already logged in.

1. Click **Run sync**.

Sync downloads products, stock, promotion schemes, salesmen, users, and related masters.

Without sync, product lookup and barcode scanning will not work.

After a large catalog or price update in central, also click **Re-sync products** (see [Settings and sync] (#19-settings-and-sync)).

Step 2 — Open the business day

1. Go to **Day Close** (navigation menu or click the day status chip).

1. Confirm today's date is selected.

1. Enter the **opening cash** amount in the drawer.

1. Click **Open day**.

The day status chip in the header should now show **Day: Open**. Bills, returns, and expenses cannot be posted until the day is open.

5. Billing (POS)

Billing is the main screen for creating sales invoices.

5.1 Customer details

Field	Description
Phone	10-digit mobile number (required to post). The field blinks until a valid number is entered.
Customer name	Required to post the bill
Customer code	Filled automatically when a customer is found
Salesman	Pick from registered salesmen (code + name). Required when at least one active salesman exists in the store master.

Finding a customer:

1. Type the phone number and press **Tab** or **Enter** — the app searches automatically.

1. Or click **Find Customer** to open the search dialog.

1. If the phone is unknown, a quick-capture dialog asks for the customer name.

Bill options (checkboxes):

Option	When to use
Hold bills	Mark as a hold-type bill
Door delivery	Customer wants home delivery
Online COD	Online order — payment collected later (no payment at post)
Stitching	Shows a delivery date picker
Print invoice	Print automatically after posting

5.2 Adding products

Use the **last row** of the line-items grid:

1. Type the **SKU or barcode** in the Product code column and press **Enter** — the item is added.
1. Or type a **product name** — a pick list opens; select the correct item.
1. Or click **Add manual** to enter a product code not in the catalog.
1. Use **F3** to jump focus to the product entry row.

You can also use the **global search box** in the header: enter a code and press **Enter**.

Product pick list columns:

- Always: SKU, Name, Rate, **Image note** (short description from central for the product image, when set)
- With Standard/Full detail: GST %, MRP, Stock, and (Full) HSN

If **Image note** is blank, central has no image description yet — billing still works normally.

Editing lines:

- Change quantity, rate, description, HSN, MRP, or tax % directly in the grid.
- Click the trash icon to remove a line.
- Use **Tab** to move between cells.

Column display: Managers can set Minimal, Standard, or Full columns in Settings → Other.

Store rate: The rate used at the counter comes from the local catalog. If central has no store price (or it is zero), the app uses the central selling price after sync.

5.3 Discounts and totals

The **invoice preview panel** on the right shows live totals:

- Subtotal, GST, item discount %, cash discount
- Applied promotion schemes (click to remove)
- Round off

- **Inter-state (IGST)** toggle for out-of-state customers
- Customer credit notes (toggle to apply)
- Credit / pay-later advance when credit billing is enabled by the manager

The **Payable** amount is what the customer owes now.

5.4 Hold a bill (F8)

Use when the customer is not ready to pay yet:

1. Add at least one line item.
1. Press **F8** or use the footer shortcut.

The bill is saved as a draft with a hold number. Stock is **not** deducted. To resume later, click **Resume held** on the Billing screen.

5.5 Post a bill (F9)

Before posting, confirm:

- Customer name is filled in
- Phone is a valid 10-digit number
- Salesman is selected if required
- At least one line has quantity × rate greater than zero
- Business day is **open**
- Your discount does not exceed your allowed limit

To post:

1. Press **F9**.
1. If stock is short, a warning appears — choose **Post anyway** (creates an indent request) or **Cancel**.
1. The **Payment** dialog opens (unless Online COD is checked):

- **Cash**
- **Card** (Pine Labs)
- **UPI** (Razorpay)
- **Credit note**
- **Split** (multiple modes)
- **Credit / advance** when pay-later billing is enabled

1. Confirm payment.

After a successful post:

- Bill number is assigned
- Stock is reduced
- Invoice may print and/or send via WhatsApp (if configured)
- Screen clears for the next bill

Press **F2** anytime to start a **new bill** (clears the current draft).

5.6 Print without posting (F10)

Press **F10** to preview or print the current draft **without** saving it as a posted bill. Useful for customer review before post.

Press **F1** on the Billing screen for an in-app quick reference.

6. Quotations

Use quotations when the customer wants a formal quote before buying.

1. Go to **Quotations** in the menu.
1. Click **Create** (or use **F2** on this page) to open the quotation editor.
1. Enter customer and products similar to Billing.
1. **Save** the quotation (it is not a posted bill and does not deduct stock).
1. Later, from the quotations list: **Open** to edit, **Cancel** unused quotes, or **Convert to bill** for an open quotation — this loads lines into Billing for payment and post.

7. Customer registration

Use when a new customer needs a full profile before billing.

1. Go to **Customers** (navigation menu).
1. Enter **Customer name** and **Mobile no.** (required).
1. Optionally mark **Credit customer** if the store allows pay-later for that customer.
1. Click **Save customer** or press **F4**.
1. A success dialog appears — choose to apply the customer to the current bill or register another.

Press **Escape** to cancel and return to Billing.

Customer codes are generated automatically. Data syncs to the central system.

8. Salesman registration

Salesmen appear in the Billing salesman dropdown.

1. Go to **Salesman** in the menu.
1. Enter salesman details and save.
1. Return to Billing and select the salesman on the bill.

Salesmen are also updated when the manager runs sync from central.

9. Credit bills

Primary till only.

Use when a pay-later (credit) sale still has a balance.

1. Go to **Credit Bills**.
1. Search by customer, bill number, status (pending / partial / settled), or date.
1. Select a bill and **Record payment** (cash, card, UPI, credit note, or split, as allowed by Settings).
1. Print a credit / balance receipt if needed.

Managers configure credit rules in Settings → Other (minimum advance, whether zero advance is allowed, etc.).

10. Bill lookup

Find any posted bill from one screen:

1. Go to **Bill Lookup**.
1. Search by invoice number, customer name, or mobile.
1. Open the bill to **view** details, start a **return**, start an **adjustment**, **duplicate print**, or print a **credit note**.

Available on all tills.

11. Sale returns and exchanges

1. Go to **Returns** (or start a return from **Bill Lookup**).
1. Enter the original **bill number** (full number or last 3–4 digits) and click **Load Bill**.
1. If multiple bills match, pick the correct one from the list.
1. Select return lines and enter **return quantity** for each.
1. Optionally add **exchange items** using the header search box.

1. Choose **Return mode**:

- **Credit note** — customer gets store credit
- **Cash refund** — cash returned (confirmation required)

1. Enter a **reason**.

1. Click **Post Return / Exchange**.

Settings (Settings → Other):

- **Allow multiple returns per bill (partial returns)** — when **off** (default), only one return transaction is allowed per posted bill.
- When **on**, you may return remaining quantity in separate transactions. Lines already fully returned in a prior transaction show a disabled **Select** checkbox and a **Prev Ret** column with the quantity already returned.

Rules:

- With multiple returns **disabled**, only one return is allowed per posted bill.
- With multiple returns **enabled**, each line tracks cumulative returned quantity; you cannot return more than the original bill quantity.
- Business day must be open.
- If exchange items cost more than the return, a payment dialog collects the difference.
- If exchange items cost less, credit balance is issued per the return mode.

12. Bill adjustments

Use to correct quantity or rate on an already-posted bill.

1. Go to **Adjustments** (or start from **Bill Lookup**).

1. Enter the bill number and click **Lookup**.

1. Edit **adjusted quantity** and **adjusted rate** per line.

1. Enter a **reason**.

1. Click **Post Adjustment**.

The screen shows the difference in payable amount and tax. Business day must be open.

13. Duplicate print and WhatsApp

Reprint a posted invoice or credit note with a **DUPLICATE** watermark.

1. Go to **Duplicate** (or press **F11** from any screen).

1. **Bill tab:** Search by invoice number, customer, or date range → select a bill → **Print duplicate copy** or **Send WhatsApp bill**.

1. **Credit Note tab:** Search and reprint a credit note.

Duplicate printing can be disabled by the manager in Settings → Other.

14. Day close and cash management

During the day

On the **Day Close** page you can:

- View live summary: bills, sales, cash/card/UPI totals, expenses, deposits, withdrawals
- **Deposit cash** — record cash put into the safe
- **Withdraw cash** — record cash taken from the drawer
- **Download full report** (CSV or Excel)

Cash deposit and withdrawal are only available while the day is open and for today's date.

End of day — Cash hand-over

1. Go to **Day Close**.
1. Click **Cash Hand Over...**
1. Count cash by denomination in the hand-over window.
1. Press **F3** to print a hand-over slip (optional).
1. Enter **actual cash in hand** and click **Close day**.
1. Confirm if the amount differs from expected.

After closing, the day status shows **Day: Closed**. No new bills can be posted until the next day is opened.

15. Daily expenses

Primary till only.

1. Go to **Expenses**.
1. Select the date.
1. Enter **description** and **amount**.
1. Click **Post expense**.

Description is required; amount must be greater than zero. Business day must be open.

16. Dashboard and reports

Primary till only.

Overview tab

- Today's and this week's bill counts
- Pending sync / credit / COD summaries with links
- Product cache status
- Filter by POS counter
- **Inventory search** — find products by SKU, barcode, or name; filter by in-stock / out-of-stock; store price column
- Stock exception shortcuts
- Recent bills list

Day close tab

- Tender breakdown: cash, card, UPI, credit notes, returns, expenses
- Store-wide rollup across all counters
- Returns, invoices, and stock exceptions (with approve) for the selected day
- Export CSV / Excel

Salesman tab

- Salesman-wise totals for a date range, drill-down to bills, export

Stock sales tab

- Brand-wise or product-wise sales compared with available quantity

All bills tab

- Search bills by invoice number, customer name/mobile, or date range
- Download report
- **Open** a bill to view details, payments, and linked return/adjustment

Bill margin tab

- Margin analysis (cost vs selling) per bill; Excel export

Analytics

Shows a **14-day daily sales trend** with total bills and revenue (separate **Analytics** menu page).

Ledger

Recent bills and payments with quick duplicate reprint (**Ledger** menu page).

17. Online COD orders

Primary till only.

Tracks online Cash-on-Delivery orders where payment was not collected at billing time.

1. Go to **Online Sales**.
1. Summary chips show balance till, pending count, and received today.
1. Search by bill number, customer, status, or date range.
1. For pending orders, click **Record payment** → enter payment mode and transaction number.

Only pending orders can receive payment. Duplicate payments are blocked.

18. Barcode label printing

1. Go to **Barcodes**.
1. Type a **SKU** in the blank row and press **Enter**, or press **F6** to open the product pick list.
1. Set **print quantity** per line (entering the same SKU again increases quantity).
1. Press **F5** to print → preview window → select label printer.
1. Press **F7** to clear the screen.

Products must be synced from central before labels can be printed. Label layout comes from the design synced from central.

19. Settings and sync

Primary till only. Open via the gear icon or navigation menu.

Connection & sync

Action	Purpose
Login / Logout	Authenticate with the central office API
Run sync	Push local bills/events; pull products, stock, schemes, users, salesmen
Re-sync products	Full product catalog refresh (resets product cursor and downloads all pages). Use after major central price or catalog changes when normal sync still looks stale
Refresh status	View outbox count, sync cursors, last error

Run sync at the start of each day. Prefer **Re-sync products** when many item prices or image notes look wrong after a central update.

When store price is unset or zero in central, the local catalog uses **selling price** as the store rate after sync.

Receipt & printing

Configure store header (name, address, GSTIN, etc.), printer queues, and print format:

- **Thermal 80 mm** — counter receipt
- **A4 / A5 / A4 Commercial** — tax / office invoice
- **Pre-printed A4 / A5** — values only on branded stationery (alignment editors included)
- **Credit receipt format** — Thermal or A4 (separate from normal invoice format)

Click **Save receipt settings** after changes.

WhatsApp

- Enable **Auto-send bill on post** when customer phone is present
- Use **Test send** to verify WhatsApp delivery

Other (manager options cashiers may notice)

Setting	Description
Allow duplicate bill print	Enable/disable F11 and Duplicate page
Confirm when adding a product already on the bill	Ask before increasing quantity
Allow CN remaining cash payout	Allow cash payout of credit note balance at payment
Allow multiple returns per bill	Partial returns across transactions
Credit billing options	Enable pay-later, min advance, credit-customer required, max balance
Line item column detail level	Minimal / Standard / Full grid columns
Razorpay POS	Device credentials for UPI payment (manager configures)

20. Keyboard shortcuts

Global shortcuts

Key	Action	Notes
F1	Help	Billing screen only
F2	New / clear current page	Page-aware (Billing, Quotation, Customers, Returns, Bill Lookup, etc.)
F3	Focus search	Product entry on Billing; SKU on Barcodes; also Returns / Bill Lookup return
F4	Save customer	Customers page only
F8	Hold bill	Billing only

F9	Post bill	Billing only
F10	Print stub	Preview/print without posting
F11	Duplicate page	From any screen
F12	Close application	Exits the app
Escape	Cancel / close menu	Context-dependent

Barcodes page

Key	Action
F5	Print labels
F6	Product pick list
F7	Clear screen

Cash hand-over window

Key	Action
F3	Print hand-over slip
F12	Exit window

Login

Key	Action
Enter	Submit login

21. Primary vs secondary till

Each computer is configured as a **till** with a unique number (POS_COUNTER in configuration).

Feature	Primary till (Counter 1)	Secondary till (Counter 2+)
Billing	✓	✓
Quotations	✓	✓
Bill Lookup	✓	✓
Salesman	✓	✓
Customers	✓	✓
Returns & Adjustments	✓	✓
Day Close	✓	✓
Duplicate print	✓	✓
Barcodes	✓	✓
Dashboard	✓	X
Analytics	✓	X
Online Sales	✓	X

Credit Bills	✓	X
Ledger	✓	X
Expenses	✓	X
Settings & sync	✓	X
Auto-sync	✓	X

Secondary tills share the same store database on the local network but have their own device identity.

22. Troubleshooting

Product not found when scanning or typing code

- Ask the manager to **Run sync** from Settings.
- If many items are missing or prices look old after a central update, use **Re-sync products**.
- Confirm the product exists in the central catalog with the correct SKU/barcode.
- For new barcode labels, print from Barcodes page, assign the code in central, then sync again.

Store price looks wrong (zero or outdated)

- Run **Re-sync products** on the primary till.
- Central often stores the real rate in **selling price**; after sync, the store rate should follow when store price is unset or zero.

Image note column is empty in product search

- Central has not set an image description for that product, or products have not been synced since it was added.
- Ask the manager to sync / re-sync products. Billing works without Image note.

Cannot post bill — "Day not open"

- Go to **Day Close** and **Open day** with opening cash.
- Only today's date can be opened.

Cannot post bill — discount limit

- Your combined item and cash discount exceeds your user limit. Reduce the discount or ask a manager.

Stock shortfall warning at post

- Choose **Post anyway** to complete the sale (creates a stock indent request), or **Cancel** to adjust the bill.

Pending notifications (bell icon)

- Click the bell → view pending sync items → **Sync now**.
- Ensure Settings → central login is active and internet is available.

Printer not working

- Settings → Receipt & printing → **Refresh printers** → select correct queue → Save.
- For thermal receipts, confirm the 80 mm printer is set as the thermal printer.

WhatsApp bill not sent

- Check Settings → WhatsApp connection status.
- Confirm customer phone is a valid 10-digit number.
- Verify auto-send is enabled if expecting automatic delivery.

Login failed

- Check email and password with your manager.
- Confirm users were synced (manager runs sync from Settings).

Secondary till missing pages

- Dashboard, Settings, Expenses, Credit Bills, Online Sales, Ledger, and Analytics are **primary till only**. Use Counter 1 for those tasks.

23. Quick reference — daily checklist

Opening (manager / primary till)

- [] Log in
- [] Settings → Login to central → **Run sync**
- [] After major central catalog/price updates: **Re-sync products**
- [] Day Close → **Open day** with opening cash
- [] Verify day status shows **Open**

During the day (all tills)

- [] Billing: phone → salesman → items → discounts → **F9 Post** → payment
- [] Use Quotations when quoting before sale; convert open quotes to Billing when ready
- [] Process returns, adjustments, and Bill Lookup as needed
- [] Record cash deposits/withdrawals on Day Close page

Closing (manager / primary till)

- ☐ Collect pending **Credit Bills** / Online COD payments as needed
- ☐ Record any remaining **Expenses**
- ☐ Review Dashboard day-close summary
- ☐ Day Close → **Cash Hand Over** → count cash → **Close day**
- ☐ **Download full report**
- ☐ Confirm notifications bell shows no pending sync (or sync before logout)
- ☐ **Logout**
